

Chapter 12: Keyboard shortcuts

Keyboard shortcuts

Keyboard shortcuts let you quickly select tools and execute commands without using a menu. When available, the keyboard shortcut appears to the right of the command name in the menu.

 *In addition to using keyboard shortcuts, you can access many commands using context-sensitive menus. Context-sensitive menus display commands that are relevant to the active tool, selection, or panel. To display a context-sensitive menu, right-click (Windows) or Control-click (Mac OS) an area.*

Shortcuts work in all modules unless otherwise indicated on full-size U.S. keyboards. Functionality may vary on other keyboards and in other languages.
